Adrian C. Bradley  
ISSI Consulting Group  
999 18<sup>th</sup> Street, Suite 1450  
Denver, Colorado 80202

Dear Adrian:

Attached is my estimate for the proposed Vasquez Blvd and I-70 pilot study. I based the estimates on approximately 40-50 samples. The cost of analyses is \$250.00 per sample and does not include my time for report writing and assistance in the synthesis of these data. Several months ago I signed a document with ISSI that allowed me to bill for such services separate from the analyses of the samples. I think this amounted to an additional \$2,000.00.

I have the document that outlines the specific contents of each deliverable and wanted to ask you a few questions with regard to timing of the work and specifics of the sampling. Right now I estimate it will take about 12 weeks from the time we receive the samples to complete the analyses. Based on the time frame of the work I will be the contract the analyses as a private consultant and hiring a student to do much of the analytical work. This will allow a much shorter time frame than if we needed to develop agreements with the university. I will reimburse the university for equipment use after the pilot study is completed..

Please feel free to contact me if you have any questions

Sincerely,

Eugene F. Kelly  
Associate Professor  
of Pedology
